Journal of Computational Chemistry

ORGANIC / INORGANIC / PHYSICAL / BIOLOGICAL

Index to Volume 13
Issues 1–10
Jan 1992–Dec 1992

A WILEY-INTERSCIENCE PUBLICATION
John Wiley & Sons, Inc.
NEW YORK / CHICHESTER / BRISBANE / TORONTO / SINGAPORE

Journal of
Computational Chemistry

Editors:

Norman Allinger, Department of Chemistry, The University of Georgia, Athens, GA 30602

Paul von R. Schleyer, Institut für Organische Chemie, Universität Erlangen-Nürnberg, Henkestrasse 42, D-8520, Erlangen, Germany

Assistant Editors:

Martin Feigel, Universität Erlangen-Nürnberg, Erlangen Germany

Roger S. Grev, University of Georgia, Athens, Georgia

Editorial Board:

Alexandru T. Balaban, Department of Organic Chemistry, Polytechnic, Bucharest, Roumania
Enrico Clementi, IBM Corporation, Cagliari, Italy
Warren J. Hehre, University of California, Irvine, California
William L. Jorgensen, Department of Chemistry, Yale University, New Haven, Connecticut
Martin Karplus, Department of Chemistry, Harvard University, Cambridge, Massachusetts
Joyce J. Kaufman, Johns Hopkins University, Baltimore, Maryland
Peter A. Kollman, University of California, San Francisco, California
Paul G. Mezey, University of Saskatchewan, Saskatoon, Canada
Keiji Morokuma, Institute for Molecular Science, Myodaiji, Okazaki, Japan
Eiji Osawa, Department of Chemistry, Faculty of Science, Hokkaido University, Sapporo, Japan
John A. Pople, Carnegie-Mellon University, Pittsburgh, Pennsylvania
Peter Pulay, University of Arkansas, Fayetteville, Arkansas
Alberte Pullman, Institut de Biologie Physico-Chimique, Paris, France
Leo Radom, Australian National University, Canberra, Australia
Harold A. Scheraga, Cornell University, Ithaca, New York
Andrew Streitwieser, Jr., University of California, Berkeley, California
Kenneth B. Wiberg, Yale University, New Haven, Connecticut

Editorial Production, John Wiley: Lillian Solondz

The *Journal of Computational Chemistry* (ISSN: 0192–8651) is published ten times per year (Jan./Feb., March, April, May, June, July/Aug., Sept., Oct., Nov., and Dec.), one volume per year, by John Wiley & Sons, Inc., 605 Third Avenue, New York 10158.

Copyright © 1992 by John Wiley & Sons, Inc. All rights reserved. Reproduction or translation of any part of this work beyond that permitted by Sections 107 and 108 of the U.S. Copyright Law without the permission of the copyright owner is unlawful. Second-class postage paid at New York, NY, and at additional mailing offices.

The code and the copyright notice in the journal indicate the copyright holder's consent that copies may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the United States Copyright Law. The per-copy fee for each item is to be paid through the Copyright Clearance Center, Inc., 21 Congress St., Salem, MA 01970.

This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Such permission requests and other permission inquiries should be addressed to the Permission Dept.

Subscription price (1992): $495.00 per volume U.S.A. Outside U.S.A.: $620.00 (air service and handling included). Back volumes, microfilm and microfiche are available for previous years; request price list from the Publisher. Please allow four weeks for processing a change of address.

Claims for undelivered copies will be accepted only after the following issue has been received. Please enclose a copy of the mailing label or cite your subscriber reference number in order to expedite handling. Missing copies will be supplied when losses have been sustained in transit and where reserve stocks permit.

Postmaster: Send address changes to *Journal of Computational Chemistry,* Susan Malawski, Fulfillment Manager, Subscription Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158. For subscription inquiries, please call customer service at (212) 850-6645 or write to the above address.

Advertising: Inquiries concerning advertising should be forwarded to Roberta Frederick, Advertising Sales, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158, (212) 850-8832. Advertising Sales, European Contact: Michael Levermore, Advertising Manager, John Wiley & Sons, Ltd., Baffins Lane, Chichester, Sussex PO 19 1UD, England.

Manuscripts should be submitted to one of the Editors, Dr. Norman L. Allinger, *Journal of Computational Chemistry,* Department of Chemistry, The University of Georgia, Athens, GA 30602; or Prof. Dr. Paul von R. Schleyer, *Journal of Computational Chemistry,* Institut für Organische Chemie, Universität Erlangen-Nürnberg, Henkestr. 42, D-8520, Erlangen, Germany. *Information for contributors* appears in the first and last issue of each volume. *All other correspondence* should be addressed to *Journal of Computational Chemistry,* Publisher, Interscience Division, Professional, Reference, and Trade Group, John Wiley & Sons, Inc., 605 Third Avenue, New York, NY 10158.

The contents of this journal are indexed in the following: *Chemical Abstracts, Mathematical Reviews, Chemical Titles, Science Citation Index,* and *Current Contents/Physical, Chemical, and Earth Sciences.*

Printed on acid-free paper.

Journal of
Computational Chemistry

Subject Index to Volume 13

Ab initio calculations, configuration interaction in Configuration interaction electron correlation, 187
Ab initio calculations, in parallel computing Parallel computing, for Hartree-Fock calculations, 160
Ab initio calculations, natural bond orbital method in Natural bond orbital method, applications of, 268
Ab initio calculations, of correlation and solvation effects, Solvation, *ab initio* calculation of, 115
Ab initio calculations, of heats of formation of acids and esters Heats of formation of carboxylic acids and esters, by *ab initio* calculations, 838
Ab initio calculations, of magnetic properties NMR spectra, by *ab initio* calculations, 551
Ab initio calculations, of water addition to formaldehyde Formaldehyde, calculation of addition of water Semiempirical calculations, of water addition to formaldehyde, 1037
Ab initio calculations, on acryloyl fluoride Acryloyl fluoride, *ab initio* calculations on, 718
Ab initio calculations, on carbonyl and thiocarbonyl ethyl esters, 799
Ab initio calculations, on CH_2N_2 and related *Ab initio* calculations, consequences of MP2 optimizations Diazomethane, *ab initio* calculations on, 1066
Ab initio calculations, on CH_5^+, 997
Ab initio calculations, on furoxan and 1,2-dinitrosoethylene Furoxan, *ab initio* calculations on, 177
Ab initio calculations, on glucose Glucose, *ab initio* calculations on, 1255
Ab initio calculations, on 4*H*-1,3,2-benzodioxaphosphorin 4*H*-1,3,2-benzodioxaphosphorin 2-sulfides, *ab initio* calculations on, 560
Ab initio calculations, on hydrogen bonding Hydrogen bonds, *ab initio* calculations on, 399
Ab initio calculations, on *n*-phenyl phthalimide Molecular mechanics calculations, on *n*-phenyl phthalimide *N*-phenyl phthalimide, calculations on, 408
Ab initio calculations, on organometallic compounds Transition metals, *ab initio* calculations on, 919
Ab initio calculations, on the McLafferty rearrangement McLafferty rearrangement, *ab initio* calculations on, 183
Ab initio calculations, on vinyloxyborane and borane carbonylation Vinyloxyborane, *ab initio* calculations on, 423
Ab initio calculations, relativistic effects in Relativistic effects, in *ab initio* calculations, 595
Ab initio calculations, the basis function problem in Basis functions, in *ab initio* calculations, 1199
Adsorption, solution of integral equations for, 17
Anomeric effect, *ab initio* calculations on *Ab initio* calculations, on anomeric effect Molecular mechanics calculations, on electrostatics from *ab initio* calculations, 772
Anomeric effect, with nitriles, *ab initio* calculations on *Ab initio* calculations, on nitriles, anomeric effect, 722
Atomic charges, for QSPR QSPR, atomic charges in, 492
3′-azido-3′-deoxythymidine, semiempirical calculations on Semiempirical calculations, on 3′-azido-3′-deoxythymidine, 478

c charges, a new population analysis empirical calculations, atomic charges from, 371
Centrifugal distortion constants, diatomic, 1103
Conformational searching, with peptides Peptides, conformational searching Heptaalanine, conformational distribution of, 1216
Crystal structures, *ab initio* calculations of *Ab initio* calculations, of crystal structures, 1171
Cycloalkanes, conformational search in Linearized embedding, 351

Density Functional Theory, calculations of electron affinities *Ab initio* calculations, of electron affinities by Density Functional Theory, 70
Difluoroethane, *ab initio* calculations on *Ab initio* calculations, on difluoroethane, 142

1,3-dipolar cycloaddition, semiempirical calculations on Semiempirical calculations, on 1,3-dipolar addition, 314
Distance geometry, 1262
Distance geometry calculations, on cyclic compounds, 565
Docking, in molecular mechanics calculations Molecular mechanics calculations, of docking, 505
Docking, of flexible molecules Conformational searching, in docking, 730
Docking, using shape descriptors Molecular shape, and docking, 380

Electron correlation, integrals in *Ab initio* calculations, of electron correlation, 602
Electronegativity, Bader's theory of, 912
Electron transfer, Monte Carlo simulation of Monte Carlo calculations, of electron transfer, 1057
Electrostatic calculations, from multiple reference Double-excitation configuration interaction calculations *Ab initio* calculations, of multipole moments, 944
Electrostatic calculations, in proteins Protein-dipole Langevin-dipole model, in protein calculations, 1109
Electrostatic calculations, using the Hellmann-Feynman theorem Hellmann-Feynman theorem, for electrostatic calculations, 457
Electrostatic potential, by *ab initio* calculations Multipole model, of *ab initio* charge distribution Formamide, electric field modeling of, 1234
Electrostatic potential, conformational dependence on Molecular mechanics, charges in, 622
Electrostatic potentials, and atomic multipole moments Atomic charges, and multipole moments, 883
Electrostatic potentials, by *ab initio* and semiempirical calculations *Ab initio* calculations, of electrostatic potentials Semiempirical calculations, of electrostatic potentials, 979
Electrostatic potentials, differences between *Ab initio* and semiempirical Semiempirical calculations, of electrostatic potentials *Ab initio* calculations, of electrostatic potentials, 842

Electrostatic potentials, with semiempirical calculations Semiempirical calculations, electrostatic potential from, 749
Enzymes, artificial molecular mechanics calculations on Molecular mechanics calculations, on artificial enzymes, 614

Free-energy calculations, on biomolecules, 1011
Free energy perturbation calculations, on nucleosides Nucleosides, free energy perturbation calculations on, 667
Free energy perturbation calculations, on thymine and adenine solvation Solvation energies, via free energy perturbation calculations, 362

Geometry optimization, in Cartesian coordinates Energy minimization, in Cartesian coordinates, 240

Hydrogen bonding, in *ab initio* calculations *Ab initio* calculations, hydrogen bonding in, 1151

Ionization energies, from MCSCF wave functions *Ab initio* calculations, of ionization energies, 1004

Kinetic systems, Taylor method for integration of, 810

Matrix diagonalization, in parallel computing Parallel computing, Jacobi Diagonalization, 155
Molecular dynamics, and distance geometry, of β-cyclodextrin β-cyclodextrin, molecular dynamics and distance geometry Distance geometry and molecular dynamics, of β-cyclodextrin, 41
Molecular dynamics calculations, of poly(oxyethylene) Poly(oxyethylene), molecular dynamics calculations on, 1210
Molecular dynamics, of 18-crown-6 18-crown-6, molecular dynamics of, 33
Molecular dynamics, over long time scale, 793
Molecular dynamics simulations, of peptides in solution Free energy perturbation calculations, precision of, 429
Molecular dynamics, using parallel processing Parallel processing, of molecular dynamics calculations, 1022
Molecular mechanics calculations, expressions for energies and forces, 585
Molecular mechanics calculations, of free radical dimerization Free radical dimerization, molecular calculations on, 541
Molecular mechanics calculations, of infrared intensities Infrared intensities, in molecular mechanics, 1138
Molecular mechanics calculations, of inversion barriers, 633
Molecular mechanics, calculations on alcohols, ethers, and hydrogen bonding Hydrogen bonding, molecular mechanics calculations on, 851
Molecular mechanics calculations, on amides and ureas *Ab initio* calculations, on amides and ureas Ureas, calculations on Amides, calculations on, 657
Molecular mechanics calculations, on imine derivatives Imine derivatives, *ab initio* and molecular mechanics calculations on *Ab initio* calculations, on imine derivatives, 57
Molecular mechanics calculations, on ketenes Ketenes, molecular mechanics calculations on, 1125
Molecular mechanics calculations, treatment of redundancies in, 1142
Molecular mechanics, calculations on trehalose disaccharides Disaccharides, molecular mechanics calculations on, 102
Molecular mechanics, CHARMm force field, 888
Molecular mechanics, fluoride and hydrogen parameters, 963
Molecular mechanics, fluoride and hydrogen parameters, 971
Molecular mechanics, general program for (PEFF), 257
Molecular surfaces, calculation of, 76
Molecular surfaces, calculation of Surface area, of a molecule, 1
Monte Carlo calculations, for conformational searching Molecular dynamics, for conformational searching Conformational searching, with Monte Carlo dynamics, 693
Monte Carlo methods, in solvation calculations Solvation calculations, using Monte Carlo methods, 468
Mori coefficients, 1119

Paracyclophanes, semiempirical calculations on Semiempirical calculations, of *n*-paracyclophanes and dewar benzene isomers, 1047
Parallel processing, in protein calculations Molecular dynamics, in proteins, parallel processing of Proteins, parallel processing of molecular dynamics in, 1098
Parallel processing, of integral calculations *Ab initio* calculations, parallel processing in, 414
Parallel processing, of protein calculations Protein calculations, parallel processing of, 533
Phosphorylcholine, atomic charges in Atomic charges, in phosphorylcholine *Ab initio* calculations, on phosphorylcholine, 318
Poisson-Boltzmann equation, for electrostatic potentials Electrostatic potentials, from non-linear Poisson-Boltzmann equation, 1114
Proteins, conformational search in, 329
Proteins, construction of the backbone from α-carbon coordinates, 443
Pseudopotentials, in *ab initio* calculations *Ab initio* calculations, using pseudopotentials, 148
Pseudopotentials, in *ab initio* calculations *Ab initio* calculations, on group V trihalides and pentahalides, 165

Reaction-diffusion equation, solution of, 570
Reaction mechanics, algorithm for generation of, 1079

Semiempirical calculations, comparison with *ab initio* for cycloalkanes Cycloalkanes, calculations on Molecular mechanics calculations, comparison with *ab initio* for cycloalkanes, 525
Semiempirical calculations, fragment method for large systems, 830
Semiempirical calculations, localized electron pair theory, 901
Semiempirical calculations, of amine pyramidalization, 640
Semiempirical calculations, of charges using a Del Re method Electrostatics, charge distribution by semiempirical calculation, 990
Semiempirical calculations, of cobalt silicide clusters Cobalt silicide clusters, semiempirical calculations on, 867
Semiempirical calculations, of vibrational Stark effect Stark effect, vibrational semiempirical calculations of, 821
Semiempirical calculations, on β-lactams β-lactams, semiempirical calculations on, 681

Semiempirical calculations, on peptide cleavage *Ab initio* calculations, on peptide cleavage Peptide cleavage, calculations on, 704
Semiempirical calculations, on transition metal compounds Transition metal compounds, semiempirical calculations on, 85
Semiempirical calculations, on transition metal compounds Transition metal compounds, semiempirical calculations on, 93
Simulated-annealing, for protein folding Protein-folding potentials, by simulated annealing, 579
Soliton dynamics, in proteins Proteins, soliton dynamics in, 275
Solvation, in semiempirical calculations Semiempirical calculations, inclusion of solvation effects in, 1089
Solvation, reaction field model, 768
Solvation, reaction field model *Ab initio* calculations, solvation in, 675
Solvation, semiempirical calculation of Semiempirical calculation, of solvation, 199
Solvation, semiempirical calculation of Semiempirical calculation, of solvation, 229
Superoxide dismutase, dynamics simulation of diffusion in Molecular dynamics simulations, of diffusion in superoxide dismutase, 66

Thermolysin active site inhibitors Molecular mechanics, calculations, on thermolysin Monte Carlo calculations, for conformational searching in thermolysin, 214
Torsional energy levels, wave functions for, 874
Transition metal compounds, *ab initio* calculations of *Ab initio* calculations, of transition metal compounds, 1184
Transition metals, *ab initio* calculations on *Ab initio* calculations, on organometallic compounds, 935

Vector processing, of integrals Integrals, vector processing of, 1246
Vector processing, of integrals Integrals, vector processing of two-electron, 12
Vibrational Schroedinger equation, numerical solution of, 135

Water, liquid, calculations on Monte Carlo calculations, on water thermodynamics, 651
Water, molecular dynamics of, the SETTLE algorithm Molecular dynamics, of water, the SETTLE algorithm, 952
